

# SMS Radio

## A Research Conversation Activity

Children, teens, and adults with Smith-Magenis Syndrome are invited to participate in a recorded conversation during the conference (5-15 minutes).

The study aims to analyze language samples to better describe how individuals with SMS across the lifespan formulate language and engage in social interaction.

- Audio/video recorded
- Parent/guardian permission required when applicable
- Participation is voluntary
- \$15 Amazon gift card and SMS Radio button provided

Stop by the SMS Radio table in the main conference area to learn more.
