

UF Department of Psychology
Behavior Analysis and Research Clinic (BARC)

Does your Child have a History of Constipation?

We are conducting a study to identify the relationship between challenging behavior and GI distress in individuals with Smith-Magenis Syndrome

Participants must have an SMS diagnosis

Study Details:

- Study length: 1 ½ months
- Weekly 1-hour sessions
- Caregiver/Guardian involvement required

Participants Will:

- Be trained on stool typing
- Schedule weekly observations with BCBA
- Collect daily data on child stool type and behavior
